5.

The screenshot shows a Python 2.7.14 IDE with a file named '5.py'. The code defines a class `Mahasiswa` with attributes `nama`, `NIM`, `kota`, `us`, and `listKuliah`. It includes methods `__init__`, `listKuliah`, `hapusKuliah`, and `ambilKuliah`. The Python Shell on the right shows the execution of these methods for a student named 'Kamal' from 'Bogor'.

```
#nomer 5
class Mahasiswa(object):
    def __init__(self, nama, NIM, kota, us):
        self.nama = nama
        self.NIM = NIM
        self.kotaTinggal = kota
        self.uangSaku = us
        self.listKuliah = []

    def listKuliah(self):
        return self.listKuliah

    def hapusKuliah(self, matkul):
        self.listKuliah.remove(matkul)

    def ambilKuliah(self, matkul):
        self.listKuliah.append(matkul)

>>> m=Mahasiswa("Kamal",224,"Bogor",50000)
>>> m.listKuliah
[]
>>> m.ambilKuliah("algoritma dan struktur")
>>> m.listKuliah
['algoritma dan struktur']
>>> m.hapusKuliah("algoritma dan struktur")
>>> m.listKuliah
[]
>>> |
```

6.

The screenshot shows a Python 2.7.14 IDE with a file named '6.py'. It defines a `Manusia` class and a `siswaSMA` class. The Python Shell shows several errors: a `NameError` for an undefined `Mahasiswa` object, a `TypeError` for the `Manusia` constructor, and an `AttributeError` for an undefined `ambilNama` attribute.

```
#nomer 6
def Manusia (object):
    def __init__(self, nama, umur, alamat):
        self.nama = nama
        self.umur = umur
        self.alamat = alamat

    def ambilNama(self, nama):
        return self.nama

    def ambilUmur(self, umur):
        return self.umur

    def ambilAlamat(self, nama):
        return self.alamat

def siswaSMA(Manusia):
    def __init__(self, nama, noAbsen, kelas, jurusan):
        self.nama = nama
        self.noAbsen = absen
        self.kelas = kelas
        self.jurusan = jurusan

    def ambilNama(self, nama):
        return self.nama

    def ambilNoAbsen(self, noAbsen):
        return self.noAbsen

    def ambilKelas(self, kelas):
        return self.kelas

    def ambilJurusan(self, jurusan):
        return self.jurusan
